Drying capacity of the reversible mat

Topguard® and Tireguard® mats consist of special rubber strips interwoven with moisture-absorbing nylon or polyester fibres. The fibres are woven vertically into the rubber, which means that they are firmly in place and that they quickly drain the absorbed moisture. The many fibres ensure maximum and longlasting absorption.

The rubber strips are separated by scraping profiles in aluminium, PVC or brass. The combination of moisture-absorbent fibres and the scraping profiles is unique.

The closed version ensures that the dirt remains on the interlock profiles and is easy to remove with a vacuum cleaner.

With the open version, the coarse dirt, which is scraped from the sole of the shoe, can be evacuated.

Topguard® and Tireguard® are perfectly resistant to heavy duty and rolling traffic.

Moreover, the rectangular version is reversible, which extends its life even further.

Verimpex has developed these two High Traffic types:

type 1 **Topguard**[®] HIGH TRAFFIC

Topguard[®] is the best option for a personalised and extremely sleek design of your entrance hall. The many options enable a 'customised' design according to your own taste. It is possible to choose the colour of the rubber strips, the interlock profiles, the shape and an 'open' or 'closed' structure.

type 2 **Tireguard**[®] HIGH TRAFFIC

Tireguard[®] combines the qualities of Topguard[®] with rubber strips made from recycled aircraft tires. To give the tires a second life, these tires are submitted to a process that releases the high-grade nylon fibres, which removes the moisture and mud of your shoes very effectively. The rough outlook and natural shades of colour make this mat unique.

Personalised mats: Ghelamco Arena

Customisation is our strength. Thanks to the wide range of colours, patterns and finishes on offer, each mat can be personalised according to the customer's specifications. The entrance mats in the Ghelamco Arena were made to measure with the logo and colours of KAA Gent football club.

TOP GUARD

HIGH TRAFFIC

1

Topguard®

Topguard® feels right at home in high-traffic places, because this mat can, in fact, withstand heavy-duty and high-traffic demands. The robust Topguard® can be made with single or double rubber strips (30% more drying surface) and with an 'open' or 'closed' construction.

This mat is ideally suited for shops, offices, banks, hospitals, ...

and is available in different colours, heights, compositions and shapes.

Even logos are possible! Topguard® meets the highest fire standards, which means that, in case of fire, your entrance hall will always remain accessible.

Tireguard®

A mat consisting of high-grade fibres and rubber strips, recycled from aircraft tires? Combined with the aluminium interlock profiles, this can only be extremely robust. Tireguard® has an excellent price/performance ratio, absorbs moisture very well and easily withstands thousands of soles each day. A sustainable and ecologically sound alternative for your entrance hall!

Verimpex atelier

Verimpex develops and manufactures a wide range of maintenance-friendly and customised top-quality floor mats.

Thanks to the wide range of colours, patterns and finishes on offer, each mat can be personalised according to your specifications. This is done in our own production departments by a team of professional craftsmen. Our own installers ensure a perfect measurement and placement of the mat.

Tests in accordance with European standards

Topguard® and Tireguard® have been extensively tested. The positive results for all these tests, where European standards were used as a basis, underline the excellent quality of Topguard® and Tireguard®.

These are available on our website www.verimpex.be

Verimpex warranty

Topguard® and Tireguard® come with a 10-year warranty against wear and tear of profiles and colours in the event of standard usage of the mat.
